Fig. G

INSTRUCTIONS - PERFECT BITE™ METHOD:

(You must also read complete instructions inside coffin box.)

1. Melt Custom Fangs Alpha One™ Thermoplastic in boiling water (Fig. A).
2. Roll thermoplastic into a daub (Fig. B).
3. Place daub into cavity of fang (Fig. C).
4. Place fang onto canine and knead excess thermoplastic past 1st and 2nd pre-molars, biting as you go, forming a partial plate. (Fig. D)

WARNING: You must remove partial plate within 5 minutes after forming the daub. This slightly enlarges the fitting before the thermoplastic sets. If you wait much longer, it may be extremely difficult to remove plate.

5. Smooth excess in front of fang up & over top of fang (Fig. E).
6. Remove partial plate (Fig. F), and trim excess off of top (Fig. G).
7. Trim excess thermoplastic off of inner sides of partial plate.

ALTERNATE METHOD: This temporary **Instant Fang™** method can be used if you have to dash off to a party, short of time. It is not recommended, however, since your Custom Witch Fangs™ can fall out with this **Instant Fang™** method. However, if you have to have quick application then **Instant Fang™** will work. The **PERFECT BITE™** method is the **best** recommended application for fangs, and we strongly urge you to take the time and take advantage of this method.

INSTANT FANG™ METHOD:

1. File or cut down top and sides of fang to fit your canine (if necessary).
2. Put adhesive powder in fang and moisten with a little water to make a paste. [Fig. H] (Stir **THOROUGHLY** with toothpick, until the powder is completely a paste.)
3. Press fang up into canine and hold tightly with finger and thumb until adhesive attaches fang to canine (2 minutes).

Fig. H

COFFIN JEWEL CHEST™: Great for placing your rings or jewelry on the slit velvet pad!
